## 17.09 =====

# SCRAP CUTTER (edge cutting unit)

## technical details:

manufacturer **RDB** year of construction 1989 material dimension (complete line)  $1.650 \times 0.50 - 3.00 \text{ mm}$ tensile strength max. 400 N/mm<sup>2</sup> working speed (previously) max. 50 m/min. working direction (previously)  $left \Rightarrow right$ 2 no. – cutting units (cutting head units) no. – cutting heads (left- / right rising) 2 pairs no. - cutting knives 6 pc. / each cutting head no. - infeed rolls 2 pc. / each head side scrap length (cutting length) app. 120 mm edge width – max. 50 mm required space (I x w) mm weight to.

## accessories / description:

- construction in a heavy steel welding construction
- 2 cutting head units with hardened and grinded cylindrical gears

All technical data are based on suppliers information and therefore without obligation for us. The machines are subject to prior sale; this offer is subject to our general terms and conditions.

### 17.09

#### ====

- shaft bearing in tapered roller bearing, upper bearings with oil lubrication
- 2 pairs cutting heads, left- / right rising with (each) 6 pc. of cutting knives
- the upper cutting heads usable for die clearance (kerf) axially adjustable
- 2 pc. of infeed rolls each head side, corded and hardened.

  The both upper infeed rolls pneumatically adjustable, the lower both infeed rolls are driven
- the feedings of the cutting head units are individual adjustable on base frame by trapezoidal elevating screw and three-phase-current gear motor adjustable
- the feeding system of the cutting head units with oil-soaked polyamide guide rail, in adjustable construction
- the drive of both cutting head units proceed by DC-motor, with connected upstream reduction gear, via coupling and hexagonal shaft (manufacturer BAUMÜLLER, power 17 kW)
- the cutting heads proceed synchronal for the working speed.
   The scrap length (cutting length) is app. 120 mm, the max. edge width is 50 mm
- the scrap pieces will be transported by feeding channel to one rubberized conveyor belt. The rubberized conveyor belt has a length of 4.000 mm

#### required space (I x w x h):

<ul><li>scrap cutter</li></ul>	1.650 x 800 x 1.150 mm
<ul><li>scrap conveyor</li></ul>	4.150 x 830 x 1.280 mm
<ul><li>transfer belt</li></ul>	3.750 x 780 x 500 mm

#### weight:

• scrap cutter	3.150 kg
<ul><li>scrap conveyor</li></ul>	kg
transfer belt	kg
